

Sumit Mittal

Lead Java Full Stack Developer | Generative AI Engineer | AWS Certified Solutions Architect – Associate

Noida, India | +91-9990550996 | sumitmittal.adonis@gmail.com | <https://www.linkedin.com/in/tech-sumitmittal>

Portfolio: <https://sumitmittal.dev> | <https://github.com/tech-sumitmittal> | <https://leetcode.com/u/tech-sumitmittal>

Summary

Results-driven Lead Java Full Stack Developer with **13+ years** of experience designing and delivering enterprise-scale, high-performance applications using Java, Spring Boot, Microservices, Angular, and AWS cloud technologies. Proven expertise in backend engineering, API development, cloud-native architecture, and distributed systems with a strong track record of achieving 99.9% uptime, improving system scalability, and leading Agile engineering teams.

Experienced in building secure, scalable, and AI-enabled enterprise applications using Spring AI and OpenAI technologies. Hands-on expertise in Retrieval-Augmented Generation (RAG), Model Context Protocol (MCP), prompt engineering, vector databases, AI observability, tool calling, structured AI outputs, speech-to-text, text-to-speech, and intelligent workflow automation. Passionate about integrating Generative AI capabilities into modern enterprise platforms.

Technical Skills

Programming: Java 21, Object-Oriented Programming, Functional Programming, TypeScript, JavaScript, SQL

Core Computer Science: Data Structures & Algorithms, System Design, Multithreading, SOLID Principles, Design Patterns

Backend: Spring Boot, Spring MVC, Spring Security, Spring IoC, Hibernate, J2EE, REST APIs, Spring AI

AI & Generative AI: OpenAI, Spring AI, Large Language Models (LLMs), RAG, MCP, Prompt Engineering, Prompt Templates, Context Engineering, Tool Calling, Vector Embeddings, Semantic Search, AI Chat Memory, GitHub Copilot

Microservices: Spring Cloud Config, Service Discovery, API Gateway, OpenAPI/Swagger, OAuth 2.0, JWT, Keycloak, Okta

Frontend: Angular 19, TypeScript, JavaScript, HTML5, CSS3, AJAX

Cloud: AWS EC2, ECS, EKS, Lambda, RDS, DynamoDB, S3, SNS, CloudWatch, VPC, EBS

DevOps & CI/CD: Docker, Kubernetes, Jenkins, AWS CodePipeline, Maven, Gradle, Git, GitHub, GitHub Actions

Databases: MySQL, PostgreSQL, Oracle, DB2, MongoDB, Redis, Qdrant Vector Database

Messaging & Event Streaming: Apache Kafka, AWS SQS

Monitoring, Logging & Observability: Prometheus, Grafana, Splunk, SonarQube, Log4j, OpenTelemetry, Jaeger

Testing: JUnit, Mockito, JaCoCo, Unit Testing, Diffblue, AI Testing, RelevancyEvaluator, FactCheckingEvaluator

Methodologies & Tools: Agile, Scrum, Kanban, Jira, SDLC, CI/CD Pipelines, Production Support

Generative AI Project

Spring AI Enterprise Application | <https://github.com/tech-sumitmittal/Spring-AI>

Technologies: Java 21, Spring Boot, Spring AI, OpenAI, Retrieval-Augmented Generation (RAG), MCP, Qdrant Vector Database, Docker, OpenTelemetry, Prometheus, Grafana, Jaeger, GitHub Copilot

- Built AI-powered enterprise applications using Spring AI, OpenAI, and conversational AI workflow automation.
- Designed RAG pipelines using Qdrant Database for semantic search and contextual AI response generation.
- Developed scalable LLM applications using prompt engineering, vector embeddings, and structured AI outputs.
- Applied tool-calling integrations, enabling LLM interactions with enterprise APIs and backend services.
- Implemented MCP client/server integrations using Spring AI for AI agent interoperability and extensibility.
- Engineered AI chat memory workflows for stateful, personalised, and context-aware conversational AI systems.
- Integrated Generative AI observability using OpenTelemetry, Prometheus, Grafana, and Jaeger monitoring tools.
- Constructed AI testing workflows using RelevancyEvaluator and FactCheckingEvaluator for AI response validation to improve AI reliability and response quality.
- Developed multimodal AI applications supporting speech-to-text, text-to-speech, and AI image generation.
- Containerised Generative AI applications using Docker and cloud-native deployment workflows for scalability.
- Leveraged GitHub Copilot to streamline AI application development and improve code quality and efficiency.

Experience

Lead Full Stack Developer, Citi Bank (via Synechron)

Toronto, Canada | Apr 2025 – Present

- Architected 15+ enterprise-grade microservices (Java 21, Spring Boot) supporting 50K+ internal users.
- Crafted secure RESTful APIs with JWT, OAuth 2.0, OpenAPI/Swagger, integrating 20+ downstream banking systems.
- Modernized Angular 19 UI, improving dashboard usability and reducing business workflow turnaround time by 40%.
- Mentored 8–10 engineers and led end-to-end delivery with around 80% hands-on coding, owning release quality.
- Assembled Redis caching, reducing API response latency by approximately 35% under peak load.
- Containerised applications using Docker, deploying on AWS ECS, configuring VPC, EBS, and CloudWatch.
- Developed and optimized Jenkins pipelines, cutting deployment time by nearly 60% and enabling bi-weekly releases.
- Ensured 99.9% uptime through proactive monitoring, log analysis, and rapid resolution of P1/P2 incidents within SLA.
- Built AI-powered enterprise applications using Spring AI and OpenAI APIs for intelligent workflow automation and conversational AI use cases.
- Implemented Conversational AI Retrieval-Augmented Generation pipelines using OpenAI models and Qdrant Vector Database for semantic document retrieval and contextual AI response generation.
- Developed AI tool-calling integrations enabling LLM-driven interactions with enterprise APIs and real-time workflows.
- Integrated AI observability and evaluation frameworks using OpenTelemetry, Prometheus, Grafana, RelevancyEvaluator, and FactCheckingEvaluator to monitor and validate AI response quality.
- Leveraged GitHub Copilot to boost development efficiency, improve code quality, and optimize workflows.

Lead Software Engineer, Ericsson

Montreal, Canada | Feb 2024 – Apr 2025

- Engineered high-availability Java backend services processing 1M+ events/day for telecom operational platforms.
- Developed frontend modules using Angular, supporting dashboards used by multiple global operations teams.
- Enhanced containerised deployments on AWS ECS, strengthening network isolation and security.
- Architected and optimized event-driven systems using Apache Kafka and Amazon Web Services SQS, increasing message throughput by close to 40%.
- Automated workflows using Jenkins CI/CD, reducing manual deployment effort by 50% and improving stability.
- Conducted code reviews and architectural discussions, reducing integration defects by roughly 25% across releases.

Technical Lead Engineer, Pinterest (via Capgemini)

Montreal, Canada | May 2022 – Aug 2023

- Supervised backend development for microservices handling millions of daily user interactions.
- Modeled scalable microservices with DynamoDB, MongoDB, Redis Cache, improving data access latency by 30%.
- Constructed J2EE Web Services, Servlets, and JSP, enabling seamless coexistence with modern services.
- Standardised API documentation using Swagger/OpenAPI, reducing onboarding time for new integrations by 40%.
- Provided Level-3 production support, resolving 100+ high-severity incidents while maintaining 99.9% uptime.
- Mentored engineers and facilitated sprint planning, achieving almost 95% sprint commitment accuracy.

Senior Java Developer, Morgan Stanley (via Genpact Canada)

Montreal, Canada | Apr 2017 – May 2022

- Rolled out enterprise applications supporting global trading and risk platforms with 99.95% system availability.
- Streamlined RESTful and SOAP-based services consumed by multiple mission-critical financial systems.
- Operationalised multithreaded consumer applications, reducing batch processing time by 45%.
- Orchestrated Redis-based caching and tuned database interactions, lowering database load by 30%.
- Secured services using JWT and Spring Security, meeting internal compliance and audit requirements.
- Improved observability using SonarQube, Prometheus, Grafana, Splunk, cutting recurring production issues by 35%.
- Supported 24x7 production systems, resolving incidents within SLA >98% of the time.

Senior Software Engineer, To The New

Noida, India | May 2016 – Apr 2017

- Provisioned web applications using Java 11, Spring MVC, Hibernate, JSP, Servlets, and AJAX.
- Designed relational schemas and optimized MySQL/PL/SQL queries, reducing query time by 30%.
- Collaborated with UI teams on web development and user interface design.
- Followed Agile methodologies, participating in sprint planning and retrospectives.

Software Engineer, Chetu India Pvt. Ltd.

Noida, India | Jan 2014 – May 2016

- Modernized full stack applications using Java 8, J2EE, JSF, JDBC, and Struts using SOLID Principles.
- Enhanced frontend components using HTML, CSS, JavaScript, jQuery.
- Used SVN, Perforce, and Eclipse/IntelliJ for version control, development and debugging.
- Ensured adherence to SDLC, coding standards, and best practices having clean architecture.

Software Developer, Startup Techies

Noida, India | Oct 2012 – Jan 2014

- Programmed end-to-end web solutions using Core Java, JSP, Servlets, JDBC, and Apache Tomcat.
- Designed and consumed REST APIs, performed API testing using Postman.
- Applied DSA fundamentals, problem-solving, and analytical thinking to optimise application performance.
- Worked closely with stakeholders, demonstrating strong communication and interpersonal skills.

Certifications

AWS Certified Solutions Architect – Associate (SAA-C03), Oct 2023

AI Software Systems Design – Concordia University Applied AI Institute, Canada, Dec 2024

Generative AI Apps with Spring AI, OpenAI, RAG, MCP, AI Testing & Observability, May 2026

Education

Master of Technology (M.Tech.) – Information Technology

University of Hyderabad | Jul 2010 – Jun 2012

Bachelor of Engineering (B.E.) – Computer Science

University of Rajasthan | Jul 2005 – Jun 2009
